KORG KP3 TEST MODE

2006.8.30 KORG PD3 T.Kanai
English by M.Y.

How to enter the simple TEST MODE

Pushing following switches, and turn the power ON.
 CONNECTION[SEND] & [7] + [TAP/RANGE] : Skipping the Audio Loop Back Inspection and the USB check
 CONNECTION[SEND] & [5] + [TAP/RANGE] : Skipping the MIDI Loop Back inspection and the USB check.

Other test modes for repairing

Pushing following switches, and turn the power ON.
 CONNECTION[SEND] & [1] + [TAP/RANGE] : Skipping the Audio Measurements and PAD surface inspection
 CONNECTION[SEND] & [2] + [TAP/RANGE] : Audio Measurement only
 CONNECTION[SEND] & [3] + [TAP/RANGE] : PAD all surface inspection only
 CONNECTION[SEND] & [4] + [TAP/RANGE] : Full inspection (Internal and External)
 CONNECTION[SEND] & [6] + [TAP/RANGE] : External inspection

 [TAP/RANGE] + [SAMPLING] : Display of System Version
 [1] + [2] + [SAMPLING] : Load the Preset
 [SAMPLING] + [SAMPLE BANK C] + [SAMPLE BANK D] : IPL Mode

Functions of switches

[TAP/RANGE] : Step Up (When an error occurred in the internal inspection, retry the inspection.)
 [SAMPLE BANK A] : Step + (Move within the item)
 [SAMPLE BANK B] : Step - (Move within the item)
 [SAMPLE BANK C] : Item Number Up
 [SAMPLE BANK D] : Item Number Down
 [SAMPLE BANK A] + [TAP/RANGE] : When an error occurred in the internal inspection, skip the inspection

Error Code

KP3 displays the Error Code in the LED, when an error occurred in the internal inspection.
 4 digits of the LED indicates the error code.

[Er.**] * (Ten's digit) : Item number (item of the internal inspection)
 * (One's digit): Test number (In the internal inspection)

- | | | |
|------|----------------------------|--|
| Item | 1. DSP IF Check | Notice: When the start-up condition or the forwarding between CPU <-> DSP is NG, KP3 cannot start the test mode, because after the forwarding the Boot code, KP3 moves to the self check sequence (TEST MODE). |
| | 2. DSP - SDRAM Check | |
| | 3. CPU ROM Check | |
| | 4. EEPROM Check | |
| | 5. Loop Back Check (Audio) | |
| | 6. MIDI Loop Check | |
| | 7. Card Check | |
| | 8. USB Check | *USB check needs a special computer, so skip by [SAMPLE BANK A] + [TAP/RANGE] when an error occurred in the inspection. |

* Initial Settings

Set the volumes and the switches like followings.

CONNECTION : SEND
 INPUT Select : LINE
 INPUT VR : MAX
 Fx Depth : MIN
 Slider : MIN (0)
 PHONES VR : MAX
 MICTrim:MAX : MAX

Connection for the automatic inspections		Cable	
LINE OUT L	→	LINE IN L	RCA cable
LINE OUT R	→	LINE IN R	RCA cable
MIDI OUT	→	MIDI IN	MIDI cable

SD Card (Protect OFF)

(Caution:) Use the AC Adaptor of KA-20*series

Internal Inspection

1. DSP IF Check

When an error occurred, the inspection stops displaying [Er.11]-[Er.13] in the LED display.

2. DSP SDRAM Check

When "Data Error", the inspection stops displaying [Er.22] or [Er.23] in the LED display.
 When "Address Error", the inspection stops displaying [Er.21] in the LED display.

3. CPU ROM Check

When "Checksum Error", the inspection stops displaying [Er.31] in the LED display.

4. EEPROM Check

When "Verify Error", the inspection stops displaying [Er.41] in the LED display.

5. OVER LOAD Line Check (Audio LoopBack)

<<<In the simple TEST MODE, you can skip this.>>>

a: OUTPUT Lch(LINE IN (Rch: GND Level)

Connect the LINE OUT(L) to the LINE IN(L), when the level of the LINE IN(L) is out of the decided range, the inspection stops displaying [Er.51] in the LED display.

Connect the LINE OUT(L) to the LINE IN(R), when the level of the LINE IN(R) is more than the decided level, the inspection stops displaying [Er.52] in the LED display.

b: OUTPUT Rch(LINE IN (Lch: GND Level)

Connect the LINE OUT(R) to the LINE IN(R), when the level of the LINE IN(R) is out of the decided range, the inspection stops displaying [Er.53] in the LED display.

Connect the LINE OUT(R) to the LINE IN(L), when the level of the LINE IN(L) is more than the decided level, the inspection stops displaying [Er.54] in the LED display.

(Caution) *1 Before the internal inspection, connect LINE OUT(L) to LINE IN(L), LINE OUT(R)to LINE in (R) by two cables.

*2 Set INPUT VOLUME at MAX, INPUT SELECT (toggle) is LINE side.

6. MIDI Loop Check

<<<In the simple TEST MODE, you can skip this.>>>

When KP3 cannot receive the Data, the inspection stops displaying [Er.61] in the LED display.

During receiving the data when KP3 could not receive some data, the inspection stops displaying [Er.62] in the LED display.

When the received data is different value, the inspection stops displaying [Er.63] in the LED display.

(Caution) *3. Connect MIDI IN and MIDI OUT by a MIDI cable, before the internal inspection.

7. Card Check

After [C.Ins] is appeared in the LED display, insert a SD card.

When a SD card is not inserted and KP3 could not detect that a card is not inserted, [Er.71] is displayed in the LED.

After inserted a SD card and remove your hand from the card, then confirm that the card is rocked.

When KP3 could not detect that a SD card is inserted, [Er.72] is displayed in the LED.

When KP3 could not write or read the data, [Er.73] is displayed in the LED.

When the inspection has completed as OK, [C.Pul] is displayed in the LED, then pull out the SD card.

(Caution) *4 Use the SD card as protect OFF.

*5 Do not insert the SD card before [C.Ins] is displayed in the LED.

8. USB Check

<< Skip this inspection>>

* The special computer is needed for this inspection, so skip by [SAMPLE BANK A] + [TAP/RANGE].

* Errors are displayed as [Er.8*], ignore these errors.

9. All LEDs light

a. Confirm that all LEDs light.

All LEDs except followings light. : LEDs(8x8) of PAD, 7segments LED[8888], [SMPL]SW

LED of two colors are followings

.:PEAK, [TAP/RANGE], [SAMPLE BANK A], [SAMPLE BANK B], [SAMPLE BANK C], [SAMPLE BANK D]

Confirm that there is not the uneven brightness, and that there is not slanted LED.

After the confirmation, push [TAP/RANGE] , then the inspection proceeds to 10 External Inspection.

10. 7 Segments LED, segments light one by one.

For each digit, segments light one by one like the right figure.

After confirmation of the four digits, push [TAP/RANGE] SW and proceed to next inspection.

(Caution) *6. You need all digit's inspection to proceed to the next inspection.

11. PAD LEDs, LEDs light one by one.

LEDs light one by one, from upper left-upper right-next right-next left-like the right figure.

Push [TAP/RANGE] to proceed to next inspection.

(Caution) *7 You need one cycle of inspection to proceed to the next inspection.

12. Switch & LED Check

*In the 7segments LED, the switch you should push at first is displayed. {wrt} is displayed in the LED.

*Proceed the inspection as following order.

*When the waiting for pushing the switch, the switch which should be push is displayed in the and LED lights which is corresponding the switch.

PROG [WRITE] → WRITE [WRITE] → BPM [SHIFT] → SHIFT [SHIFT] → PEAK 赤 [PROGRAM/BPM] →
 PEAK 緑 [PROGRAM/BPM] → 1 [1] → 2 [2] → 3 [3] → 4 [4] → 5 [5] → 6 [6] → 7 [7] → 8 [8] →
 TAP/RANGE 赤 [TAP/RANGE] → TAP/RANGE 緑 [TAP/RANGE] → AUTO BPM [AUTO BPM] →
 PAD MO

*After switch's inspection, next is inspection of the [CONNECTION]SW. [dirE] is displayed in the LED, set [CONNECTION]SW to "DIRECT". [Send] is displayed in the LED, set [CONNECTION]SW to "SEND"

(Caution) *8 Confirm that the indicated LED lights in the indicated color. (No indication is red.)

*9 When other wrong) switch is pushed or plural switches are pushed, LED blinks.

*10 [SAMPLING]SW has no LED, so it does not light and {SMPL} is displayed in the LED.

*11 [CONNECTION]SW has no corresponding LED, so it is only in the 7 segments LED display.

SWITCH | 7Seg-LED | LED lights

	対応SW	7Seg LED	点灯LED	
1	[WRITE]	{wrt }	PROG	
2	[WRITE]	{wrt }	wrt	
3	[SHIFT]	{ShFt }	BPM	
4	[SHIFT]	{ShFt }	SHIFT	
5	[PROGRAM/BPM]	{Enod }	PEAK 赤	RED
6	[PROGRAM/BPM]	{Enod }	PEAK 緑	GREEN

28	[SAMPLE BANK D]	{Sb-d }	SAMPLE BANK D 赤	R
29	[SAMPLE BANK D]	{Sb-d }	SAMPLE BANK D 緑	G
30	[CONNECTION]	{dirE }	なし	
31	[CONNECTION]	{Send }	なし	

13. Encoder Check

[Enc.0] is displayed in the LED.

Pull out the knob, adjust the shaft of the Encoder(PROGRAM/BPM) at the start position.

After adjusting, push [TAP/RANGE]SW then [0] is displayed in the LED display.

a. Encoder right

Rotate the encoder to the right one cycle.

After one rotation, confirm [30] is displayed. Then push [TAP/RANGE] to proceed to next step.

After one rotation, [-30] is displayed or other display than[30] is displayed, it is NG.

During rotation,

[5]LED lights, at 1/4 position

[5],[6] LEDs light at 2/4 position

[5],[6],[7] LEDs light 3/4 position

[5],[6],[7],[8] LEDs light after one rotation Rotate left and the display is less than 30, the corresponding LED lights.

When passed even if one click, [5],[6],[7],[8] LEDs turn OFF

b. Encoder left

Rotate the encoder to the left one cycle.

After one rotation, confirm [30] is displayed. Then push [TAP/RANGE] to proceed to next step.

After one rotation, [-30] is displayed or other display than[30] is displayed, it is NG.

During rotation,

[4]LED lights, at 1/4 position

[4],[3] LEDs light at 2/4 position

[4],[3],[2]LEDs light 3/4 position

[4],[3],[2],[1] LEDs light after one rotation Rotate left and the display is less than 30, the corresponding LED lights.

When passed even if one click, [4],[3],[2],[1] LEDs turn OFF

Confirm that there is no rubbing or feeling of not smooth when rotation.

14. FX DEPTH Check

[FX.dP] is displayed in the LED display.

Rotate FX DEPTH to the left end, all LEDs of [1]-[8] are OFF.

Rotate FX DEPTH to the right, [1], [2], [3], [4], [5], [6], [7], [8] LEDs turn ON (increasing one by one),

and at the right end all LEDs of [1]-[8] turn ON. Rotate to the left, LEDs turn OFF one by one (decreasing).

After finished, inspection proceeds to next.

Confirm that there is no rubbing or feeling of not smooth when rotation.

After the confirmation, proceed to next inspection.

15. LEVEL (Slider) Check

[SLdr] is displayed in the LED display.

Push [TAP/RANGE] to start the inspection.

Move LEVEL slider from MIN(lowest)->MAX(highest)->MIN(lowest)

At MIN(lowest) position, all LEDs of [1]-[8] are OFF.

Move to MAX(highest), [1], [2], [3], [4], [5], [6], [7], [8] LEDs turn ON (increasing one by one),

At MAX(highest) position all LEDs of [1]-[8] turn ON.

Move to MIN(lowest), LEDs turn OFF one by one (decreasing).

Confirm that there is no rubbing or feeling of not smooth when moving.

After the confirmation, proceed to next inspection.

16. Touch PAD Check

[Pd.1] is displayed in the LED display.

One LED upper left turns ON, push this part by your finger then [P_1] is displayed in the LED then remove the finger from the PAD. The next LED turns ON.

[P2.] is displayed in the LED display.

4 LEDs of upper left turn ON, push the center of these then [P_2] is displayed in the LED. then remove the finger from the PAD.

[P3.] is displayed in the LED display.

One LED lower right turns ON, push this part by your finger then [P_3] is displayed in the LED then remove the finger from the PAD.

After removing the finger from PAD, inspection proceeds to next.

17. Touch PAD Calibration

Complete steps 2 & 3 of "Calibrating the Touch Pad" on the next page; or push [SAMPLE BANK D] to skip this item.

18. Inspection of the PAD surface.

After audio measurement, push [SAMPLE BANK D] then [Pd.2] is displayed in the LED and start the inspection of the PAD surface. When you touch the PAD, KP3 sounds.

Stroke slowly all the surface of the PAD and confirm that the frequency of the sound does not change.

When the sound changed to high frequency sound, the inspection is NG

because other part than the part you touch is pushed.

When stroking the PAD, confirm that there is not strange feeling.

Confirm that sound stops when you remove the finger from the PAD.

The inspection is NG when the sound does not stop after removed from the PAD.

Confirm that there are no dusts and etc. on the surface and beneath the PAD.

19.Preload

Move the {CONNECTION}SW to "DIRECT" to the status of waiting for the preload.

[PrLd] is displayed in the LED display, pushing [SAMPLE BANK A] sw and push [TAP/RANGE] to execute the preload.

After finished preload, KP3 restarts in normal operation and [LOAd] in the LED display changes to [FLE.1].

[FLE.1] is not displayed in the LED display after few while the preload is failed.

Calibrating the Touch Pad

Depending on the operating environment, the touch pad segments that light when the pad is pressed might be out of position. When this happens, the following steps should be taken to re-calibrate the touch pad.

Please use a plastic pointing device such as a PDA stylus or a gaming device touch pen. using a sharp or metallic object will risk damaging the touch pad surface.

1. Turn on the power while pressing the PROGRAM MEMORY 7, PROGRAM MEMORY 8 and [SAMPLING] buttons.

"CAL.1" should appear on the display and the four bottom left touch pad segments should light up.

2. Using the pointing device, lightly touch the centre of the four lit segments where the grid lines cross as shown in the diagram below.

!NOTE! do not move the pointing device from this position while the pad is touched.

After touching this point for a short while, the calibration will move onto the next step: the next set of four segments will light and the display should read "CAL.2".

3. Remove the pointing device from the touch pad and repeat for the next position indicated by the segment lights.

Complete all four steps as shown in the following diagrams.

② CAL.2

③ CAL.3

④ CAL.4

4. After completing the four steps, the touch pad lights will go out and "P.oFF" will be displayed.

!NOTE! do not turn the power off until "P.oFF" is displayed.

5. The unit is now re-calibrated. Turn the power off and on as usual and confirm that the KP3 operates correctly.

KORG KP3 PARTS LIST
